Mah Noor

Aspiring AI Researcher | Machine Learning & Data Analyst | Python Trainer

Lahore, Pakistan · Email · LinkedIn · GitHub

PROFILE

Information Technology graduate with practical exposure to machine learning data workflows, analysis, reporting and software quality assurance. Work includes dataset annotation, OCR outputs, preprocessing, error investigation and Python instruction. Seeking research-focused Master's opportunities and scholarships as preparation for long-term PhD research in AI and computer science.

EDUCATION

Bachelor of Science in Information Technology | Graduated 2022

Government Graduate College Sahiwal, Pakistan | CGPA: 3.62 / 4.00

Academic foundation: programming, information systems, software development and computing fundamentals.

PROFESSIONAL EXPERIENCE

Machine Learning Analyst | Data preparation & model analysis

- Prepared, annotated and organized datasets, including OCR-derived outputs, for downstream analytical and ML workflows.
- Reviewed incorrect model predictions and investigated possible causes in labels, preprocessing steps and input quality.
- Used repeatable analysis and data-quality checks to support model troubleshooting and pipeline improvements.

Data Analyst & Research Analyst | Practical assignments and client work

- Supported dataset review, data processing, reporting and research-oriented problem investigation.
- Collaborated with UK-based clients on data scraping, structured data entry and information organization.

TEACHING, MENTORING & COMMUNITY

Volunteer Moderator | iCodeGuru | Apr 2025 – Present **View**

- Supported online technical learning and community sessions, helping learners engage with practical programming material.

Python & technical training

- Taught foundational Python programming concepts and guided beginner learners through hands-on exercises.
- Contributed sessions covering software quality assurance (SQA), Jira/Hubstaff workflows and IELTS speaking moderation.

INTERNATIONAL COMPETITIONS & LEARNING PROGRAMS

Harvard CS50x Puzzle Day 2026

- Worked in a team that solved all 10 puzzles, using logical reasoning, systematic problem solving and collaboration under time constraints.

Meta Hacker Cup 2025 | Global programming competition

- Took part in a timed algorithmic contest involving the interpretation of programming problems, solution design and correctness testing.

UC Berkeley CALICO Fall 2025 | Programming competition

- Participated in an international algorithmic programming challenge that required structured problem decomposition and implementation under contest constraints.

Stanford Code in Place 2026 | Selected student

- Selected as a student for Stanford's introductory Python learning program, strengthening programming fundamentals.

SELECTED PROJECTS & TECHNICAL WORK

Sales & Profit Dashboard | Power BI View

- Created a business-intelligence report to visualize sales and profit information, compare metrics and communicate business performance; a report PDF is publicly linked.

Python Data Visualization | Plotly & Jupyter Notebook View

- Practiced creating data plots in Python, using notebook workflows to explore datasets and communicate trends visually.

Selenium Automation Testing | Python View

- Developed practice scripts for automated browser interactions and testing; complements experience writing and documenting manual QA test cases.

Python & Algorithm Practice | GitHub View

- Maintains exercises in Python and programming fundamentals, alongside LeetCode practice for data structures and algorithmic thinking.

Travel Application | Undergraduate Final-Year Project

- Developed an Android travel application using Java and XML. Academic project; source code is not publicly available.

TECHNICAL SKILLS

Programming & environments: Python; Java and XML (academic project); Jupyter Notebook; Google Colab; Git/GitHub.

Data analytics & visualization: Power BI, Tableau, Excel, Google Sheets, Pandas, Matplotlib, Plotly; dashboard and report preparation.

Machine learning workflows: Dataset preparation, annotation, OCR output review, preprocessing, data-quality checks and analysis of prediction errors.

Testing & automation: Selenium, manual test-case writing, TestRail; software quality assurance practices.

Project coordination: Jira, Hubstaff, task tracking, remote collaboration and documentation.

Currently exploring: Generative AI and LLM applications, model evaluation, deep learning and automated reporting.

RESEARCH INTERESTS

Reliable and explainable machine learning · Data quality and model evaluation · Applied AI and deep learning · Generative AI/LLM applications · Human-centered ML workflows

ACADEMIC GOAL & RESEARCH AVAILABILITY

Open to research internships, faculty-supervised projects, research assistantships and scholarship-supported Master's programs in Computer Science, AI, Machine Learning and related areas. Long-term goal: PhD research focused on making data-driven AI systems more reliable and useful.

ADDITIONAL DOCUMENTATION

Public work and teaching documentation: GitHub profile · Volunteer teaching · SQA sample
